Art Unit: 1712

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Obrecht '488 alone or in view of CA '498. The rejection is applied as in the previous Office Action. Applicant argues that there is no motivation to use the phosphoryl polysulfide sulfur donor required in the claims as the sulfur donor in the composition of Obrecht. As evidenced by the product data sheet from Rhein Chemie Rheinau GmbH Rherocure® SDT/S, cited by applicant, phosphoryl polysulfides are commercially available non-discoloring sulfur donors used to vulcanize natural and synthetic rubber that provide good reversion stability of crosslinking bridges. See the specification at page 2, lines 6-16. As phosphoryl polysulfides are art recognized non-discoloring sulfur donors used to vulcanize natural and synthetic rubber providing good reversion stability, it would have been obvious to use commercially available phosphoryl polysulfides or the phosphoryl polysulfides taught by CA '498 as the sulfur donors in the double bond containing rubber of Obrecht in order to reduce discoloration and improve reversion stability.

Applicant further argues that unexpected results have been demonstrated when phosphoryl polysulfides are used as the sulfur donor. The evidence presented in the specification is not commensurate in scope with the claims. Example 3 uses a combination of two specific phosphoryl polysulfides one of which is a zinc phosphoryl polysulfide not encompassed by the formula in the amended claims. There is no evidence that a phosphoryl polysulfide encompassed by the formula used alone improves the properties of the vulcanized rubber compositions.
